

Greyter Voted the Best by NAHB

With more than 400 entries in nine categories, the 2017 National Association of Home Builders' International Builders' Show (NAHB IBS) features the best home building products of the year. Toronto-based Greyter Water Systems was extremely honoured and humbled to receive the Best Green Building Product award in Orlando, Florida in January for the Greyter HOME – a residential system that recycles shower and bath water so that it can be reused for toilet flushing or irrigation. The Greyter HOME is an affordable and easy to install solution that is capable of meeting water quality standards of major markets, requires little maintenance and leaves a small footprint in the home.

A very special thank you to both the NAHB for their nomination and to the judges – 28 industry and media professionals – for selecting the Greyter HOME as this year's winner. We also recognize and salute this year's finalists for all of their accomplishments. We would like to extend a huge thank you to the Greyter Water Systems team for their hard work and perseverance. And, of course, thank you to our extended family and friends for always supporting us. We are also deeply grateful to Craig Wardlaw (National Research Council Canada Industrial Research Assistance Program), the WaterTAP team, the MaRS team, Brenda Lucas (Southern Ontario Water Consortium), Rita Patlan (Ministry of International Trade) and Dr. Brent Wootton and the Centre for Alternative Wastewater Treatment staff. **BB**

John Bell and Mark Sales presented with the Best Green Building Product award.

Mark Sales, Dana Morgoch and John Bell, part of the proud Greyter team.
