

Since 2012, Greyster has been providing water harvesting and reuse systems for Commercial, Industrial, Educational and Residential buildings throughout North America.

Considering the size of these building sites, roof size, land, and occupant load, Rainwater and Stormwater systems provide excellent reuse applications such as toilet flushing, irrigation, cooling tower makeup and assist with onsite stormwater mitigation and management. Think of 80,000 people and the volume of water that could be saved by just reusing Rainwater and Stormwater for toilet flushing. Just one event could be 100,000-gallons of water saved.

BENEFITS OF REUSE

- Help meet stormwater regulations
- Reduce size or eliminate storm pond
- Reduce maintenance costs for storm ponds
- Increase yield on land
- Help meet ESG and sustainability goals
- Earn LEED points for USGBC Green Buildings
- Reduce potable water consumption
 - Toilet flushing
 - Cooling towers
 - Irrigation

Greyster provides water treatment solutions utilizing modular designs tailored to each customer's unique site requirements.

TAILORED OPTIONS

- Monitoring
- Filtration
- Disinfection
- Diversion
- Distribution

GREYTER SERVICES

- Engineering Specification
- System Design
- System Production
- Installation Support
- Commissioning
- Training
- Service & Maintenance
